Summary

Computer Science undergrad exploring the intersection of software engineering and artificial intelligence. Prefer learning through experimentation, iteration, and building software that solves meaningful problems.

Education

Amrita Vishwa Vidyapeetham

Bachelor of Technology, Computer Science & Engineering

2024 – 2028

Coimbatore, India

Experience

Full Stack Development Intern

Code Developer Solutions

May 2026 – June 2026

Coimbatore, India

- Built responsive full-stack web applications by developing both front-end interfaces and back-end functionality.
 - Collaborated on real-time projects, implementing features, debugging issues, and following software development best practices.
-

Projects

CodeFlow — GitHub

React, TypeScript, Firebase

- Developed a cloud-based online code editor with secure authentication, real-time code execution, and scalable session management.
- Integrated Firebase Authentication and Firestore for persistent user-specific code storage.

VisionDx — GitHub

TensorFlow, Keras, Flask, Computer Vision

- Built and optimized a CNN-based deep learning model to classify 4,000+ retinal images into five eye disease categories, achieving 93% accuracy.
- Deployed the model using Flask for real-time inference and evaluated performance with Precision, Recall, F1-score, ROC-AUC, and Confusion Matrix.

Foretype — GitHub

Python, Trie, Bloom Filter

- Designed a high-performance autocomplete engine using Trie and Bloom Filter for efficient prefix search and memory optimization.
 - Implemented adaptive frequency-based ranking with persistent storage for personalized suggestions.
-

Technical Skills

Languages: Python, Java, C, JavaScript, SQL

Frameworks & Libraries: React, Flask, TensorFlow, Keras

Web Technologies: HTML5, CSS3

Databases: MySQL, Firebase Firestore, Supabase

Tools: Git, GitHub, VS Code, Arduino, Obsidian

Certifications

- Automated Machine Learning for Beginners (Google & Apple) – Udemy
- Basics of Data Structures and Algorithms – Simplilearn SkillUp
