Summary

Computer Science undergraduate working across backend architecture, cloud integrations, and developer tooling, with hands-on experience building SaaS applications, cloud-based platforms, and automated development workflows.

Education

Amrita Vishwa Vidyapeetham 2024 – 2028

Bachelor of Technology, Computer Science & Engineering *Coimbatore, India*

Experience

Web Development Intern [View Certificate] May 2026 – June 2026

Code Developer Solutions *Coimbatore, India*

→ Worked with Python and Django on an e-campus portal supporting school administration and student workflows, gaining hands-on experience working with an existing web application and professional development workflows.

Projects

InvoiceFlow [GitHub] [Live Demo]

Django, PostgreSQL, ReportLab

→ Architected a multi-tenant billing system with Django ORM and PostgreSQL, enforcing company-scoped data isolation across customers, products, invoices, and payments through session-based tenant resolution and membership checks.

→ Implemented an automated invoice reconciliation workflow that validates payments, computes balances, detects overdue invoices, and synchronizes payment-driven status changes across the dashboard.

CodeFlow [GitHub] [Live Demo]

React, TypeScript, Firebase

→ Developed a cloud-based browser code editor using React and TypeScript with Monaco Editor, supporting code execution across 9+ programming languages through asynchronous Judge0 integration.

→ Implemented Firebase Authentication and Firestore-backed snippet management with protected routes, auto-save, and user-specific storage; integrated a Gemini-powered AI assistant for code-aware assistance.

AutoCommit [GitHub] [Marketplace]

TypeScript, VS Code API, Git, Extension Development

→ Developed and published a VS Code extension that automates Git workflows by analyzing repository changes, generating Conventional Commit messages, and executing commit/push operations through a single command.

→ Built a zero-dependency rule engine to classify repository changes and infer commit scopes from file paths and diffs, achieving 280+ cumulative VS Code Marketplace acquisitions.

Technical Skills

Languages: Python, Java, C, PHP, JavaScript, TypeScript, SQL
Web & Frameworks: Django, Flask, React, HTML, CSS, Tailwind CSS
Databases: MySQL, PostgreSQL, SQLite, Firebase Firestore, Supabase
Developer Tools: Git, GitHub, VS Code, Postman, Vercel

Certifications

→ Automated Machine Learning for Beginners (Google & Apple) – Udemy [View Certificate]

→ Basics of Data Structures and Algorithms – Simplilearn SkillUp [View Certificate]
